

# CONAD SUPERMARKET - MEDICINA (BOLOGNA)

## MORE SAFETY AND CARE FOR THE ENVIRONMENT FOR THOSE WHO INVEST IN WOOD

The Conad supermarket chooses wood and embraces the eco-sustainability and green philosophy of Sistem Costruzioni, as well as demonstrating that it places the safety and structural stability guaranteed by glulam technology, a construction system with high anti-seismic properties, in the foreground. The beams are light and flexible, suitable for covering even very large spaces, ideal for structures like this 1,750 square meter store.

### PRODUCT SPECIFICATION

Supermarket
<b>Localization:</b> Medicina (Bologna)
<b>Intended use:</b> Shopping facilities
<b>Architetur and structural design:</b> Architect Corradi
<b>Total area:</b> 1750ft

# BUILDING SYSTEM

## Laminated and Solid

### Reasons for choosing the Laminated and Solid system

This construction system guarantees **the creation of timber roofs of various sizes and of different levels of complexity** in compliance with specific static loading calculations and transferring vertical and horizontal loads to the foundations by means of conventional building elements, in certain cases.

### A durable and versatile timber roof

The unique characteristic of laminated wood and the connections between the various elements make it possible to create roof spans of more than 30 metres and **to build roofs of very large surface areas without having to break up the ground plan of the building with awkward intermediate pillars.**

### High levels of insulation and strength

Depending on the thermal requirements, the **roof** can be completed with an insulating package and outer covering. The joists of the web roof structure can be designed in accordance with a very diverse range of geometries: the ridge beam establishes the shape of the roof while the wall plate beam can be adapted to match architectural, static or application requirements. The nodes of the web support structure can be created with metal plates fastened to the wood with screws and pins, with wood to wood joints, or by means of direct fastening with normal screws or full-threaded screws. Because they are extremely slender elements, timber joists or rafters must be braced with timber or steel elements designed to prevent the occurrence of lateral out-of-plane instability.

#### **Sede / Headquarter:**

Sistem Costruzioni s.r.l.  
Via Montegrappa 18 - 20  
41014 Solignano di Castelvetro (MO), Italy  
Tel. +39 059 797477 - 797591  
Fax. +39 059 797646
